Create HomePage

🕐 Apr 22   ☰   P

---

backend

- Create simple word of the day
generator.

JU

---

backend

- Create simple get api for random
word

JU

Doing the fetch calls

P

---

database

- Create users data base tables:

☰   💬 1   J

---

backend

Route to enter a score for a logged
user.

P

---

backend

Daily scores, api that returns current
day's scores data, and username. To
display for daily scoreboard. (top 10
people)

JU

---

backend

All time score board, api that returns
all scores and usernames from highest
to lowest score, only returns top 10
people.
